SENSOR

HIGH CONTRAST VISION

Since its inception, Cébé's passion for eye protection and comfort has enabled the creation of innovative products to meet every need. Today, with our new lens technology, **we can offer the best vision ever.**

SENSOR

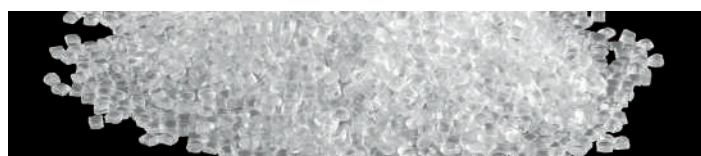

HIGH CONTRAST VISION

IMPROVED
CONTRASTSBETTER COLOR
DEFINITIONOPTICAL
CLARITY*Highlights obstacles on trails*

HOW DOES SENSOR WORK?

A SELECTIVE TRANSMISSION

Our new lens, made of injected polycarbonate which includes color pigments and additional pigments, allows us to create our own spectrum curve which:

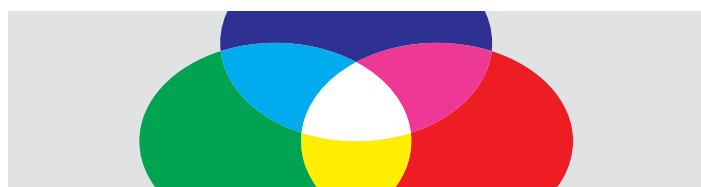

→ **Maximizes the transmission** of 2 wavelengths : green and red colors (the most difficult for the human eye to perceive)

→ **Reduces** the perception of the yellow color

→ **Reduces** bad blue light

This selective transmission of light therefore allows better contrast, a better definition of colors as well as more clarity.

BETTER COLORS' PERCEPTION

ADDITIVE COLOUR SYNTHESIS

The yellow color is the result of the fusion between green and red so if we reduce the perception of the yellow color, we will better distinguish red and green colors.

SENSOR EFFECTS

TRANSMITTANCE CURVE

①

100% UV protection

②

Good protection against bad blue light

③

Improved perception of the beneficial blue light

④

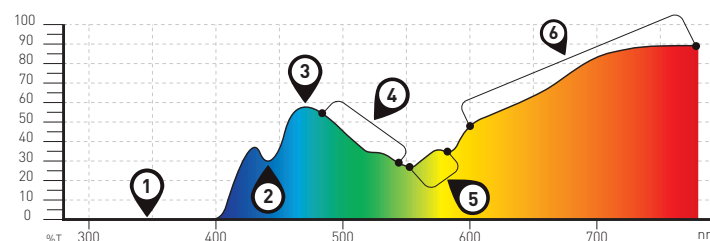

Maintains good perception of the green light

⑤

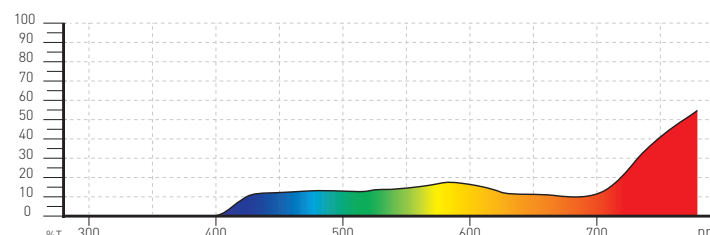

Reduced perception of the yellow light to increase contrasts

⑥

Improved perception of the red light

CÉBÉ GLOBAL LENS TECHNOLOGY

MATÉRIAUX DES VERRES

IMPACT RESISTANT AND LIGHT-WEIGHT

POLYCARBONATE - CÉBÉ ZONE LENS

20 times more impact resistant than glass and substantially lighter (the specific gravity^[1] of a polycarbonate lens is 1.22g/cm³ compared to 2.53g/cm³ for a mineral lens), polycarbonate lenses offer the best combination of protection, performance and visual comfort. Our new Sensor High-Contrast lenses are made of polycarbonate.

[1] Specific gravity describes the density of a lens material by comparing its density to the density of water.

SUPERIOR OPTICS

MINERAL - CÉBÉ PEAK LENS

Thanks to its Abbe number^[2] (58) much higher than the one of polycarbonate (29), mineral lenses are the best for optical clarity. They also offer maximum scratch resistance and durability. The Cébé Peak lens is perfect in high-altitude, desert or other environments subject to exceptional light intensity or weather conditions.

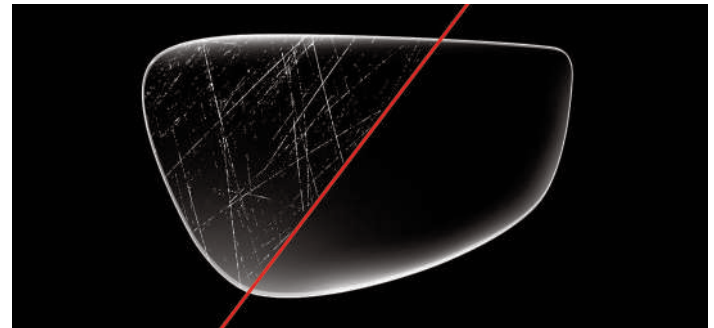

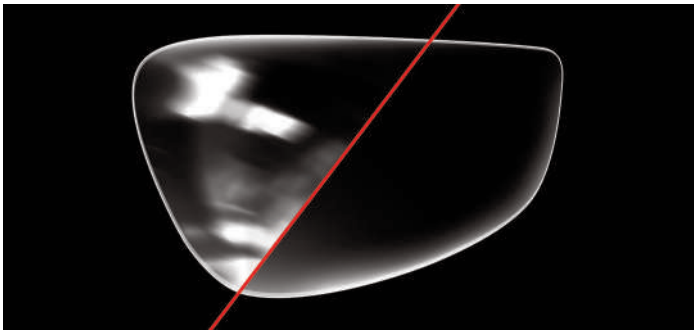

[2] Higher value means better optical quality. The Abbe value is used in RX to determine the geometry of the lens. For plano lenses, the Abbe value does not have influence as they are 2mm thick.

LENS TREATMENT

ELIMINATES BACK GLARE

ANTI-REFLECTIVE COATING

Applied to the back side of the lenses, an anti-reflective coating eliminates the negative effects of back glare to effectively prevent eye fatigue and provide premium optical quality.

FOR MORE DURABILITY

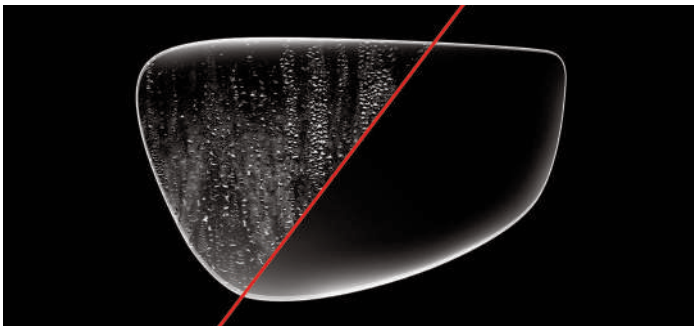

ANTI-SCRATCH COATING (BAYER TESTED)

Our specially formulated anti-scratch hard coating applied to the outside lens increases the lens hardness thus improving scratch and abrasion resistance. Our coating also builds a better foundation for the adhesion of mirrored coating.

FOR CRYSTAL-CLEAR VISION

ANTI-FOG COATING

Cébé's anti-fog coating is applied to the inside of the lens, dispersing water molecules across its surface and preventing the build-up of condensation and moisture.

ENHANCES FILTRATION PERFORMANCE

MIRRORED COATING

Cébé Flash Mirror lenses have a uniformly and fully mirrored coating applied to the surface of lenses, on both centre and sides, unlike the traditional type of mirror coating, which colour only centralized at the centre of the lenses. This offers a better look, a uniformed eye perception and enhanced filtration performance.

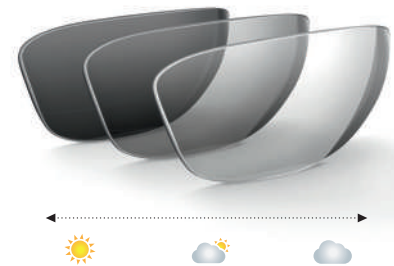

PHOTOCHROMIC LENSES

ULTIMATE ADAPTABILITY

CÉBÉ ZONE VARIO

Photochromic lenses function by darkening or lightening depending on the amount of ultraviolet rays coming from the sun.

With our photochromic lenses Zone Vario, available in category 1 to 3 and 2 to 4, that adapt to the weather variations in less than 20 seconds (recorded at 23°C), CébÉ offers a real solution in providing premium vision and comfort under diverse lighting conditions.

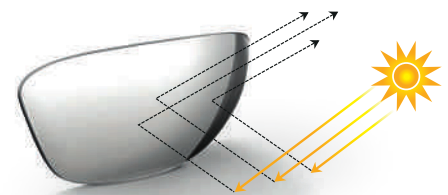

POLARIZED LENSES

AVOIDS GLARE

CÉBÉ ZONE POLARIZED

When light is reflected from flat surfaces like the road, water, hoods of car, etc, it becomes polarized as it travels in a more constant direction, usually horizontally. This creates a disturbing, dangerous and at times blinding intensity of reflected light.

Our CébÉ Zone Polarized lenses contain a filter that blocks this intense reflected light thus reducing glare. It helps to reduce eye fatigue and ensures optimal vision.

CÉBÉ GLOBAL FRAME TECHNOLOGY

THE RIGHT BASE FOR THE RIGHT USE

BASE CURVE

The base curve corresponds to the radius of the sphere of the back surface of the lens. The lower the number, the flatter the style.

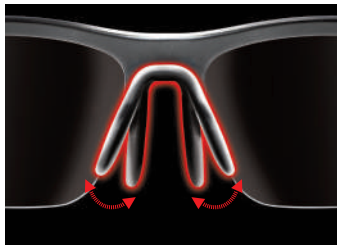

COMFORT

FOR A PERFECT FIT

ADJUSTABLE NOSE PADS

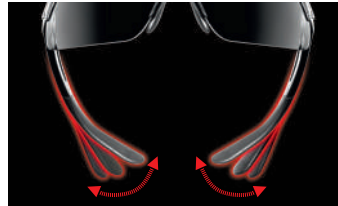

Flexible rubber material which adapts perfectly to the shape of the nose giving maximum comfort.

FOR COMFORT AND STABILITY

ADJUSTABLE TEMPLES

The temple tips made with a wire core co-injected with rubber material allow you to adjust your sunglasses for a perfect fit.

FOR A NO SLIP GRIP

ANTI-SLIP RUBBER

Rubber insert on the nose pads or temples for enhanced comfort.

FLEXIBLE FRAME

DOUBLE INJECTION

Rubber and plastic parts of the frame are double injected. This means more flexible frames for maximum comfort and no pressure points.

VISION

FOR A CRYSTAL-CLEAR VISION

VENTILATED FRAME

Air vents located on the side or underside of the frame allow air circulation for anti-fog feature.

THE PERFECT LENS WHATEVER THE WEATHER CONDITIONS

INTERCHANGEABLE LENS

Quick and practical lens changing system, allowing you to go out no matter the weather conditions. A selection of Cébé models is supplied with 1 or 2 spare lenses.

FOR PRESCRIPTION WEARERS

PRESCRIPTION SUPPORT PROGRAM

Optical clip available fitted with prescription lenses. Still maintains a good field of view.

SAFETY

FOR MAXIMUM COVERAGE

LATERAL PROTECTION

Integrated, magnetic or removable, for the best protection against side glare, wind and debris.

FOR SAFETY AND STABILITY

STRAP

Adjustable strap developed by Cébé suited to all mountain activity styles (except Utopy) and Junior styles (except Avatar, Katniss and Cooper), also keeping the glasses firmly on your head.

FRANÇOIS D'HAENE TESTIMONY ON SYMBIOTECH™ SUNGLASSES

"I need to have technical sunglasses in which I can trust!"

"Symbiotech™ temples have been initially designed for trail-running and running in general. They follow the shape of my face and thus avoid pressure points for maximum stability and comfort, exactly what I'm looking for to practice my sport. All athletes, whatever their level, can feel the benefits of this technology."

Fransois D'Haene -

SYMBIOTECH™

A HIGH LEVEL OF FRAME STABILITY!

REVOLUTIONARY &
EXCLUSIVE TECHNOLOGY

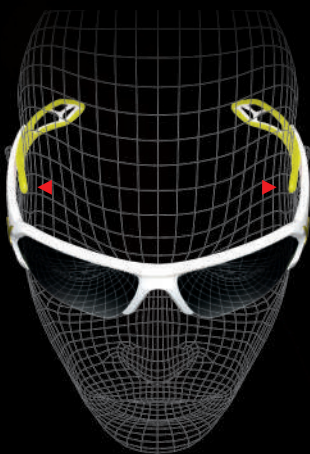

TWO ADDITIONAL
CONTACT POINTS

AN ULTIMATE MODIFICATION
FOR MOUNTAIN BIKING

Superior comfort & perfect hold on the face

SYMBIOTECH™
TECHNOLOGY

Engineered with a spatula on the inside of each temple curving to a V-shape, it allows for two additional contact points. This results in a better balance of the sunglass' weight and ensures perfect hold on the face.

CÉBÉ SYMBIOTECH™ IS DIVIDED INTO 3 CATEGORIES:

→ MEN → WOMEN / LONG HAIR → JUNIOR

NEW

MEN

SYMBIOTECH™, DESIGNED FOR AND WITH SPORT CHAMPIONS

An ultimate modification has been engineered for mountain bikers, with a spatula directly integrated to the temple and not removable, to improve strength and facilitate your glasses-helmet combo.

AVAILABLE ON S'TRACK L & M
AND S'TRACK MONO M

WOMEN

SYMBIOTECH™ DESIGNED FOR LONG HAIR

New configuration to prevent hair getting stuck in the temples, but same technology.

AVAILABLE ON S'PRING 2.0

JUNIOR

SYMBIOTECH™ FOR JUNIOR

Symbiotech™ technology now adapted for children, made with soft and flexible materials. Top stability even during play!

AVAILABLE ON S'MILE, S'KIMO, S'CALIBUR,
S'PIES AND S'TRIKE

RUNNING

Whether for trail or urban running, Céb  sunglasses are your best ally as you explore the great outdoors and push back your limits. With Sensor lenses and Symbiotech™ technology on board, they deliver optimal stability and unparalleled contrasted vision. It just remains to be seen how far you can go.

PROTECT YOUR CHILDREN FROM BLUE LIGHT!

15 TIMES MORE HARMFUL

WHAT ABOUT BLUE LIGHT?

Also called HEV (High-Energy Visible) light, blue light is the highest frequency light in the visible spectrum. It is known to be 15 times more harmful to the retina than other colours in the spectrum. HEV light causes photochemical lesions in retinal cells. This deterioration of retinal cells causes cataracts and Age-Related Macular Degeneration (AMD or ARMD), which lead to significant vision loss.

YOUNG RETINA ARE SENSITIVE

WHY KIDS NEED SPECIAL EYE PROTECTION?

- Because children generally receive 3 times the annual sun exposure of adults, some experts say that half of a person's lifetime of exposure to UV is attained by early adulthood.
- Young eyes are especially susceptible to damage to the light- the retina at the back of the eyes are particularly sensitive due to the fact that a child's ocular lens cannot effectively filter UV-related and blue light.
- Nearly all blue light reaches the retinas of children because the cornea and lens are not capable of absorbing these rays.

ZONE BLUE LIGHT LENSES

Why should kids use our junior lenses?

▼
**OUR BLUE LIGHT FILTER
IS SPECIAL PIGMENTS
IN THE LENS MASS ITSELF!**

▼
**BLOCK HARMFUL
HIGH ENERGY BLUE LIGHT
(HEV)!**

▼

PERCEPTION!**

▼
**IMPROVE VISUAL ACUITY
AND PROVIDE BETTER
COLOUR PERCEPTION!**

EXCELLENT AND NATURAL PERCEPTION

CATEGORY 3 LENS

A grey category 3 lens provides excellent and natural perception of surroundings (unlike many category 4 children lenses which can in fact be dangerous as children may not be able to distinguish stop signs while walking or riding their bike).
