

A photograph of two skiers standing on a snowy mountain ridge. The skier in the foreground is wearing a red jacket and a black helmet, while the skier behind them is wearing a green jacket and a green helmet. They are both holding ski poles and have their skis on their backs. The background shows a vast, snow-covered mountain range under a clear blue sky. A bright green diagonal bar is on the right side of the image, and a black diagonal bar is on the left side.

YCÉBÉ
PURE ADRENALINE

MOUNTAIN INSPIRED PERFORMANCE

For almost 125 years, **CÉBÉ** has always been inspired by **MOUNTAINS** and draws its strength and know-how from this environment.

The mountains are a source of **ADRENALINE**, they are majestic but unpredictable too.

They demand respect and call for humility. This is where we get our inspiration.

Today, Céb  s sole purpose is to equip and protect **all adventurers** seeking **PURE ADRENALINE** and to intensify their **sensory experience**.

CÉBÉ'S HISTORY

1892

Birth of the brand, in the **Jura mountains** in Morez. Céb  is a pioneer in the manufacture of sport sunglasses.

1968

C b  designs goggles and helmets for **ski champions**, including **Jean Claude Killy** the three-time Alpine skiing Olympic champion in Grenoble in 1968.

Early 2000

C b  introduces its revolutionary temple construction which allows wearers to achieve the **highest level of frame stability** ever

S'TECH™

2018

The **Exo OTG goggles**, combining magnetic lenses and a special design for prescription wearers, is distinguished with the **ISPO Award**.

2020

C b  decides to modernize its iconic S'Track style through more tense and assertive lines. **WELCOME TO THE S'TRACK 2.0!**

When **ski holidays** become popular, the company extends its activities to the manufacture of **helmets, goggles** and sunglasses.

1940

1970

Walter Cecchinel creates the very famous C b  Cecchinel a range of specialized **sunglasses for glaciers**.

2013

The brand wins Gold in the prestigious **ISPO Award** with its **S'track** style, originally thought of by and for experienced trail runners.

SENSOR
HIGH CONTRAST VISION

TODAY

The fact that the brand is so successful is also due to its mindset: it resolutely **sets its face to the future**; C b  is constantly **looking for new horizons to conquer!**

HELMETS

HELMETS TECHNOLOGY

CORE

ALL-MOUNTAIN

YOUNG RIDERS

RENTAL

HELMETS TECHNOLOGY

SHELL CONSTRUCTION

→ Training video 

ABS CONSTRUCTION

HIGH CAPACITY OF SHOCK ABSORPTION

The ABS construction is made from a single injection to provide maximum resistance to time and impacts. Made of ABS beads this construction prevents any risk of deformation.

IN-MOLD CONSTRUCTION

COMFORT AND LIGHTNESS

Ultra-light construction made from an EPS injection and an ultra-resistant polycarbonate shell. The In-Mold construction has become the reference in terms of comfort and being lightweight.

HYBRID CONSTRUCTION

PERFECT COMBINATION OF LIGHTNESS AND RESISTANCE

Cébé's hybrid construction represents the perfect combination of In-Mold technology and injected ABS. The ABS shell, at the top of the helmet ensures good impact resistance and protection while the In-Mold construction, on the lower part, is a guarantee of having a lightweight and comfortable product.

DETACHABLE AND WASHABLE LINING

COMFORT AND HYGIENE

In the interests of comfort and hygiene, most of our helmets have removable and washable inner padding. For increased breathability, most linings have 3D mesh panels that allow heat to escape more easily.

REMOVABLE EAR PADS

A FREESTYLER LOOK

Removable and washable earpads.

SAFETY

MIPS BRAIN PROTECTION SYSTEM

KEEP YOUR BRAIN SAFE

MIPS technology is designed to add protection against rotational motion transmitted to the brain from angled impacts to the head. Indeed, the low friction layer allows the head to move 10 to 15mm, in all directions, inside the helmet, and so redirects energies and forces otherwise transmitted to the brain.

MOTION MIPS

CONTEST VISOR
ULTIMATE MIPS

CONTEST VISION
MIPS

POW MIPS

RECCO®

BE SEARCHABLE, BE SAFE

The RECCO® Rescue Reflector, incorporated in our helmets, helps professional rescuers locate you in the event of an avalanche accident or if you are lost outdoors. The detector used by rescuers emits a directional signal and the RECCO® reflector worn by the user bounces the signal back to show them the way.

RECCO® TECHNOLOGY IS NOT A SUBSTITUTE FOR AN AVALANCHE TRANSCIVER.

FIT

FINE TUNING FIT SYSTEM

FIT VERSATILITY

The F.T.F. (Fine Tuning Fit) provides added versatility to the helmet. The fine adjustment allows a tighter fit for perfect stability during even the most extreme activities.

When not skiing, a simple readjustment will release the system for a more relaxing fit.

CÉBÉ UNIVERSAL FIT

REVIEWED FIT, MORE PRECISE AND ADJUSTABLE

Cébé Universal Fit (CUF) has been created to deliver a more consistent range in terms of fit. The width of each size range is now reduced, so Cébé offers adjustable helmets to guarantee maximum stability, comfort and safety. You'll be certain to find the perfect helmet for you!

VENTILATION SYSTEM

ULTRA VENTING SYSTEM

MAXIMIZE THE AIRFLOW

The call of virgin slopes very often incites riders to hike uphill. And to ensure they enjoy it as much as the descent, Céb  innovates and launches its Ultra Venting System technology which allows the upper part of the helmet to be lifted at an angle of 4  and thus maximize the air flow. With the Versatile helmet, your head will be kept cool but without compromising on safety since it has a double certification for skiing and mountaineering.

ADJUSTABLE VENTING SYSTEM

CONTROL THE AIRFLOW

Adjustable, easy to use and extremely efficient, our ventilation system allows you to change the amount of air flow and expel heat even with gloves.

PASSIVE VENTING SYSTEM

KEEP YOUR HEAD COOL

C b 's passive venting system is composed of openings placed at strategic points to ensure a constant air flow, evacuating heat and avoiding cold air from entering.

LENS TECHNOLOGY

NXT®

OPTICAL CLARITY

NXT® is one of the best lenses in terms of optical clarity, impact resistance and lightness (the specific gravity⁽¹⁾ of a NXT® lens is 1.11g/cm³ compared to 2.53g/cm³ for a mineral lens). It also gives more reactivity and higher amplitude to photochromic treatment.

PHOTOCHROMIC

NXT® VARIO PERFO
Amber Flash Mirror

CAT. 1-3
 →
VLT 73% - 16%

(1) Specific gravity describes the density of a lens material by comparing its density to the density of water.

(2) Specific gravity describes the density of a lens material by comparing its density to the density of water.

POLYCARBONATE

IMPACT RESISTANT

20 times more impact resistant than glass and substantially lighter (the specific gravity⁽²⁾ of a polycarbonate lens is 1.22g/cm³ compared to 2.53g/cm³ for a mineral lens), polycarbonate lenses offer the best combination of protection, performance and visual comfort.

LENS TECHNOLOGY

LENS BASE TINTS PERFORMANCE

MIRROR COATING PERFORMANCE

PHOTOCHROMIC LENS

In freeride, we regularly move from a large expanse of sunlit powder snow to a shaded north-falling corridor. The photochromic technology allows me to keep optimal vision whatever the chosen playing field and the brightness. I appreciate in the most when I'm in a competition, I don't need to wonder what lens category I should use, I can concentrate 100% on my performance! When I drop down a mountain face where precision is the key word and where the slightest mistake can be costly, I know I can trust my equipment and my vision!

*Fred
Gullot
Ski*

SAME LENS

Different light conditions call for different lens tints. Photochromic lenses function by **darkening or lightening** depending on the **ultraviolet rays** coming from the sun and so **adapt automatically to light conditions**.

PHOTOCHROMIC LENS

POLYCARBONATE LENS

- + High impact resistance
- + Cracking resistance
- + Perfect base for applying lens treatments

NXT® LENS

- + Developed with ESSILOR SUN SOLUTION
- + Optical clarity
- + Impact resistance
- + Lightness
- + More reactivity and higher amplitude to photochromic treatment

AVAILABLE ON

AVAILABLE ON

GLOBAL LENS TECHNOLOGY

ANTI-FOG COATING

FOR A CRYSTAL-CLEAR VISION

Cébé's anti-fog coating is applied to the inside of the lens, dispersing water molecules across its surface and preventing the build-up of condensation and moisture.

ANTI-SCRATCH COATING

FOR MORE DURABILITY

Our specially formulated anti-scratch hard coating applied to the outside lens increases the lens hardness thus improving scratch and abrasion resistance. Our coating also builds a better foundation for the adhesion of mirrored coatings.

SOS RX ADAPTER

GOOD VISION WHATEVER YOUR PRESCRIPTION

The Cébé SOS RX Adapter can be easily put in place to provide the corrective vision required while maintaining the wide field of vision. It's compatible with all styles except Jerry 2.

CBOPTIGOG

Cébé SOS RX Adapter for Goggles.

WIDE FIELD OF VIEW

SEE EVERYTHING AROUND YOU

The wide field of vision ensures maximum peripheral vision both horizontal and vertically allowing you to observe and enjoy everything around you.

GLOBAL LENS TECHNOLOGY

SINGLE LENS

PERFECT VISIBILITY

Made of polycarbonate, Cébé's single lenses are very impact resistant and allow good ventilation.

DOUBLE LENS

PERFECT VISIBILITY

The PC and AC double lens construction from Cébé offers perfect visibility eliminating any distortion and fog.

VENTILATED LENS

AVOID ANY RISK OF FOGGING

Openings on the external lens allow an optimized air circulation between the two lenses and inside the goggle, avoiding any risk of fogging and maintaining a better thermic regulation. Foam on the upper and lower parts of the goggle allow these airflows to circulate while preventing snow and moisture from infiltrating.

CYLINDRICAL VS SPHERICAL

IMPROVED FIELD OF VIEW

Cylindrical lenses are designed on a base curvature on the X axis (horizontal), and thus follow the curve of the face offering a good field of view. On the other hand, spherical lenses are designed on both X and Y axis (horizontal and vertically) which gives a more rounded shape and a better quality of vision by reducing optical distortions and maximizing vertical and horizontal peripheral viewing angles.

FRAME TECHNOLOGY

MAGNETIC TECHNOLOGY

In the mountains, weather conditions change very quickly and you have to be able to adapt. With the Icone magnetic goggle, I've found the solution! As well as being well ventilated and having a wide field of vision, it comes with two lenses, in category 3 and category 1. Easy to slip into a backpack, the 9 magnets make it easy to switch lenses and this means I can react quickly, even in extreme conditions!

Cébé's magnetic technology allows you to **change your lenses in a flash**. Designed with **8 to 9 magnets** and sold with **2 lenses** (category 1 and category 3), the 3 goggles from the magnetic collection ensure the **best vision possible whatever the weather conditions**. The power of the magnets also guarantees a **good hold of the lens** to offer you **maximum security**.

PAGE 53

CÉBÉ SWIPE TECHNOLOGY NEW

Cébé's new game changing technology. Slide up the lens to benefit from enhanced ventilation particularly valuable in ski touring. This unique system also makes switching lenses easy so you're ready to face all weather conditions!

FRAME TECHNOLOGY

OVER THE GLASSES

WEARING PRESCRIPTION GLASSES WILL NO LONGER BE A PROBLEM

Our OTG range offers wider goggles and strategic cuts into the inner foam and frame to perfectly fit prescription glasses. Cébé also added a magnetic OTG style to the range with a thinner nose to facilitate the positioning of glasses, even with the goggle already positioned on the face.

ARTICULATED OUTRIGGERS

BETTER HELMET INTEGRATION

The articulated outriggers provide better helmet integration and prevent deformation of frame and lens for more comfort and optimized vision.

3 DENSITY FOAM

SOFT TOUCH FOR MAXIMUM COMFORT

Overlapping of dual density foam with a fleece coating to ensure a better retention and more comfort.

SILICONE STRAP

PERFECTLY MAINTAINS ON THE HELMET

The silicone strips inside the strap ensure better stability and good support of the goggles on the helmet.

SPHERICAL

- ICONE
- FATEFUL
- ARTIC M

ICONE

The Icône is part of the Cébé Magnetic Family and is characterized by its magnetic removable spherical lens.

Extremely adaptable with its 2 interchangeable ventilated lenses cat.1 or cat.3, this design ensures optimum vision whatever the weather conditions.

SUNGLASSES

PEAK LENS

As a mountaineer, I am simply «closer» to the sun. That's why I need the best protection for my eyes. I naturally chose Cébé sunglasses featuring mineral lenses. They ensure a great protection against sun rays as they are in category 4 and a crystal-clear vision. They also offer optimal contrast and enhance the depth perception which is vital in high-mountain environment. Even after days, weeks or months of exposure to extreme sunny conditions, my eyes are not irritated, so I will for sure continue to wear these sunglasses!

Moriz Comptelin

Cébé Peak lenses are made of **mineral**, the best material for **optical clarity** and **durability**. They are available in **category 4** and thus are perfect for **high-altitude** or other environments subject to **intense light** or weather conditions. Definitely the best choice for the Cébé mountaineering team!

PROTECTION

▼
GOOD GLARE
REDUCTION

▼
THE BEST
FOR OPTICAL CLARITY

▼
TRUE COLOUR
PERCEPTION

▼
MAXIMUM
SCRATCH-RESISTANCE

MINERAL - CÉBÉ PEAK LENS

Superior optics

Thanks to its Abbe number¹ (58) much higher than that of polycarbonate (29), mineral lenses are the best for optical clarity. They also offer maximum scratch resistance and durability. The Cébé Peak lens is perfect for high-altitude, desert or other environments subject to exceptional light intensity or weather conditions.

¹ Higher value means better optical quality.

The Abbe value is used in RX to determine the geometry of the lens.

For plano lenses, the Abbe value does not have an affect as they are 2mm thick.

PEAK LENSES

PROTECT YOUR EYES AT HIGH-ALTITUDE

UV radiation increases by 4% for every 300 metre rise in altitude and snow reflects up to 80% of the UV transmitted by the sun.

Consequently, the higher the altitude, the more intense the sun rays.

Even in overcast weather the sun represents a danger to the eyes as UV rays are not necessarily blocked by clouds. Eye protection is therefore critical and category 4 lenses are the ones we strongly recommend as they let only 6% of the visible light pass through.

Without adequate protection, the epithelium (the protective layer of the cornea) rapidly deteriorates, with the risk of causing a snow ophthalmia. This inflammation of the cornea results in a painful burning sensation, along with red and watery eyes. In the longer term, UV exposure can lead to more serious pathologies: ocular lesions, premature cataracts or skin cancer around the eyes.

ALTITUDE	INTENSITY OF SOLAR RADIATION
Sea level	x 1
2000m high	x 1,5
4000m high	x 2,5

PROGUIDE

JORASSES L

JORASSES M

BLUE *light* LENS

In recent years, we have become far more aware of the harmful effects of blue light on the eyes, especially in young children. As a mother, it is essential for me to protect my son, especially in terms of his health. So I naturally chose Cébé to protect his eyes. I chose them mainly for their Blue Light lenses and category 3 protection (which makes it possible to distinguish colours clearly, unlike darker lenses). I also like the style and comfort of the frames: very covering for even more protection, ultra-flexible and colourful. My son has literally adopted them and now he wants to wear them as soon as the sun comes up!

Cébé Zone Blue Light lenses excel at **preventing eye strain and damage to vision** in children, **filtering** up to 94% of **harmful blue light** while offering **100% of UV protection**.

Available in category 3, they improve **visual acuity** and provide **better colour perception**. Made of polycarbonate, they also ensure maximum **impact resistance** and **lightness**. In short, the perfect combination for children to enjoy their outdoor activities!

PROTECT YOUR CHILDREN FROM HARMFUL BLUE LIGHT

■ 15 TIMES MORE HARMFUL

WHAT ABOUT BLUE LIGHT?

Also called High-Energy Visible (HEV) light, the blue light is a visible component of light. It's divided in 2 parts: the Blue-Violet light, known to be 15 times more harmful to the retina than other colours in the spectrum and which can cause lesions in retinal cells and so cataracts and Age-Related Macular Degeneration (AMD). On the other side, turquoise blue light is beneficial to the organism. It influences the sleep/being awake cycles and also the memory.

■ YOUNG RETINAS ARE SENSITIVE

WHY DO KIDS NEED SPECIAL EYE PROTECTION?

- + Because children generally receive 3 times the annual sun exposure of adults, some experts say that half of a person's lifetime of exposure to UV is attained by early adulthood.
- + Young eyes are especially susceptible to damage from light. The retina at the back of the eyes are particularly sensitive due to the fact that a child's ocular lens cannot effectively filter UV-related and blue light.
- + Nearly all blue light reaches the retinas of children because the cornea and lens are not capable of absorbing these rays.

SUMMIT

ORESTE **NEW**

**Equipped with this new lifestyle oriented and unisex design,
3 to 5 year-old-kids are about to conquer their new kingdom!**

The Oreste features our Blue Light lens technology ensuring not only reinforced protection against UVA/UVB but also filtration of harmful blue light.
