TECH AND FIBRES

FIBRES

MERINO WOOL

The highest, finest and best type of wool obtainable. Merino wool is listed as a Class One wool. Merino wool does not itch and is shrink treated to hold its size and shape.

ACRYLIC

The synthetic fiber is soft, warm, lightweight, machine washable, fastdrying and long wearing. It is resistant to shrinkage, sagging, stretching and does not itch. It is also excellent for cushioned products and has high wicking properties.

POLYPROPYLENE

The high vapour and moisture management transport properties allow the feet to stay warm and feel dry even under the most extreme conditions. This synthetic fibre is lightweight, hydrophobic, durable and resilient.

POLYAMIDE - NYLON

Polyamide - Nylon is a thermoplastic silky material. It is the first successful polymer and the first synthetic fiber to be made entirely from coal, water and air. Characteristics of Polyamide - Nylon are durability, softness, high elongation and excellent abrasion resistance.

ELASTANE

The synthetic fiber is strong, lightweight, flexible, comfortable, machine washable and shape retentive. Elastane can stretch over five times its relaxed length and fully recover. A common trademark for elastane is Lycra®.

LAMB'S WOOL

It is the soft elastic wool shorn from lambs seven or eight months old. It is soft and elastic, and it is used in high-grade textiles.

COTTON

Cotton is a soft, natural fibre that absorbs moisture easily and draws heat away from the skin making socks comfortable to wear. The fabric doesn't irritate skin or cause static electricity.
