

# SKI 2023 MAIN MASTER

*DAINESE*

We start from nature  
to control elements.  
We prepare for excellence  
to dare the extreme  
in all conditions.  
Speed is our playground.  
Our challenge to protect is endless  
for your freedom  
to explore your potential.

## DERMIZAX™ EV

Dermizax™ EV is a waterproof, windproof, and wicking membrane that utilizes moving molecules, as opposed to most other membranes which have micropores. This offers a number of advantages and makes Dermizax™ shell clothing the very best on the market thanks to its high performance and superior durability. The Dermizax™ membrane is extremely flexible. It has an elasticity of more than 200%. In practice, this means that the membrane can be stretched up to twice its own length in four directions. This ensures that Dermizax™ garments are very comfortable to move in, while reducing the risk of delamination during extreme activities.

## DERMIZAX™ DX

Dermizax® DX is a 2 way stretchable membrane that, thanks to its ultrathin non porous membrane is capable to provide the user with superb waterproofness and tough performance that withstands all-round outdoor conditions

## QUICKDRY FRAME

Designed to channel moisture away from the body, Quickdry Frame® is the technology to ski always dry and comfortable. Coupled with Dainese premium materials, thanks to its functional pattern, Quickdry Frame® makes materials dry 30% faster."

## D-DRY® PLUS

D-Dry® Plus is a proprietary microporous laminated structure that creates a waterproof and breathable fabric. Micropores are thousands of times smaller than a drop of water, but larger than water vapor, so they exclude water allowing moist vapor on the inside to move outward. D-Dry® Plus is devised of a unique, new three layer construction. This includes an ultra lightweight scrim fabric that is laminated on the back of the waterproof/breathable layer, sandwiching between the scrim, the membrane and the face fabric. This new overall construction is lighter, more packable and more durable. D-Dry® Plus effectively balances protection from rain and snow on the outside (30.000 mm water column) with the ability to let warm perspiration escape outward during high-output activities (30.000 g/m2/24hrs).

## D-DRY®

D-Dry® is a technology that provides optimum impermeability to water and air. Its elevated breathability ensures the evaporation of perspiration in all weather conditions.

## SUPERFABRIC®

SuperFabric® is among the most durable, toughest fabric in the world, an innovative ceramic-coated low friction material that can provide very high levels of abrasion and slash resistance. SuperFabric® technology takes a fabric and overlays it with tiny plates ("guard plates") in a specific arrangement. The gaps between guard plates allow complete flexibility. It won't snag like knitted fabrics, which is especially important in helping protect against the additional injuries caused by material catching or pulling. It allows air to pass in and around the tiny guard plates creating a remarkable air-breathing product.

## GOOSE DOWN

Goose down is the layer of underplumage that geese have beneath their feathers to keep them warm and dry. A down cluster is soft and fluffy and has filaments growing in all directions. Unlike feathers, down does not have quills. Goose down is traditionally used to fill pillows, duvets and other types of bedding. Goose down clusters are superior as they have larger and so possess more fill power and therefore have better insulating properties than down from any other bird. Goose down is luxuriously soft, resilient and has excellent insulating properties. It varies in colour from white to dark gray. It is also extremely breathable. Water vapour can pass through the down whilst the air pockets retain their warmth. These properties make goose down an excellent choice of filling for duvets and other bedding.

## D-THERMO INSULATION

Dainese's synthetic microfiber thermal insulation material. It offers good standard in terms of warmth to weight ratio and a relatively good compressibility.

## 3M™ THINSULATE™

3M™ Thinsulate™ Insulation Type G is a workhorse insulation – warm, durable, versatile, yet lightweight. These insulations help trap and hold body heat, while still allowing moisture to escape. The lofty profile enables versatile garment design, with extra warmth and durability. It's capable to hold up in the harshest conditions, while the fiber bonded matrix construction allows for a great durability.

## PRIMALOFT® CROSS-CORE™ INSULATION

PrimaLoft® has established itself as the world leader in providing comfort solutions with high-performance insulation, fabrics and yarns through an unwavering commitment to pushing the boundaries of material science. We are constantly striving to create innovative new technologies that unlock your potential to connect with the outdoors. The PrimaLoft® Cross Core™ series represents a significant advancement in our technological capabilities. The PrimaLoft® Cross Core™ series fuses multiple PrimaLoft® technologies to create next-level comfort and performance.

## PRIMALOFT® SILVER INSULATION BOOST

A hybrid of PrimaLoft® Silver Insulation Down Blend and PrimaLoft® Silver Insulation, PrimaLoft® Silver Insulation Boost is a fusion of 80% PrimaLoft® ultra-fine fibers and 20% water-repellent down engineered to deliver incredible lightweight warmth and wet weather performance in a luxuriously soft and remarkably slim silhouette. Unmatched warmth-to-thickness thermals mean more warmth in a smaller package for greater agility and freedom of movement while a PrimaLoft® proprietary treatment ensures protective performance in variable conditions. For streamlined performance this solution blends the wet-weather protection of PrimaLoft® synthetic insulation with the enhancement of down.

## PRIMALOFT® BLACK

The PrimaLoft® family of insulations is widely regarded as the highest-performing on the market, offering comfort and protection in variable weather conditions. PrimaLoft® Black Insulation - 80% PCR is no different, offering the warmth, softness and lightweight comfort you expect to deliver performance you can feel. It's packed with everything you need to brave the elements. And best of all it contains 80%-post consumer recycled material.

## FLEXAGON BACK PROTECTOR

Flexagon redefines the standards of protective comfort with its innovative construction technology. The exceptional flexibility is aided by overlapping layers of Crash Absorb® memory retention foam that move independently of one another, and follow the anatomy of the body. Its ergonomic pattern of hexagon shaped soft pads provide comfort and maximum freedom of movement (6 sides, mobility on the 30° 90° and 150° axes) along with effective protection..

## AUXAGON BACK PROTECTOR

Inspired by the geometry of auxetic structures, which expand in all directions when placed under tension, Auxagon protective technology ensures extreme flexibility and adaptability, following the movements of the human body with extreme precision. Ultimate ergonomics for a superior fit on the back. Auxagon protectors are composed of three independent layers, which glide over each other, offering exceptional mobility for maximum freedom of movement during physical activity. Lightweight and comfortable with maximum protection in all conditions.

## CRASH ABSORB

Special material (water-repellent elastic-visco nitrile rubber) with shape retention memory and excellent energy absorption that adapts perfectly to the shape of the body and ensures optimum fit.

## ERGOTEK KNUCKLE INSERTS

Dainese Ergotek technology is the ultimate expression of ergonomics and protection. Developed by combining polyurethane and carbon fiber inserts, it allows the fingers to be moved separately, guaranteeing a superior safety of the knuckles. This innovative technology applied to gloves is the result of studies carried out in World Cup Alpine Ski races. Thanks to their unique design, the hand stays light and has a total freedom of movement. It is the new benchmark in terms of protection and comfort.

## MEASUREMENTS

As it is not currently possible to industrially produce tailored back protectors, back protector must be worn by people with anthropometric characteristics lying within a certain range. A back protector is suitable for a person if its height does not exceed the seventh cervical vertebra and if the minimum area of the model is related to a waist shoulder height greater than or equal to that of the person.

## CHOOSE THE SIZE OF A PROTECTOR CORRECTLY

The choice of the correct size of a back protector, according to the standard, is determined by the Waist-Shoulder height. This is the difference in height between the midpoint of the shoulder and the waistline (immediately above the hipbone). According to the Dainese standard, this measurement must then be qualified by the correct dimension of waist strap, identified by a size (ex: XS, S, M,...). It is not correct to define the measure of the back protector on the basis of the height of the person, because even if the back could have the same dimension, the legs could have a different length.
