A close-up photograph of a dark blue, finely ribbed fabric surface. Numerous water droplets of varying sizes are scattered across the fabric, reflecting light and creating a shimmering effect. The droplets are most concentrated in the upper half of the frame, with a few larger ones in the center and smaller ones towards the bottom.

DERMIZAX™ EV

Dermizax™ EV is a waterproof, windproof, and wicking membrane that utilizes moving molecules, as opposed to most other membranes which have micropores. This offers a number of advantages and makes Dermizax™ shell clothing the very best on the market thanks to its high performance and superior durability. The Dermizax™ membrane is extremely flexible. It has an elasticity of more than 200%. In practice, this means that the membrane can be stretched up to twice its own length in four directions. This ensures that Dermizax™ garments are very comfortable to move in, while reducing the risk of delamination during extreme activities.

PRIMALOFT® BLACK

The PrimaLoft® family of insulations is widely regarded as the highest-performing on the market, offering comfort and protection in variable weather conditions. PrimaLoft® Black Insulation - 80% PCR is no different, offering the warmth, softness and lightweight comfort you expect to deliver performance you can feel. It's packed with everything you need to brave the elements. And best of all it contains 80%-post consumer recycled material.

AERSENSE-DRY

Aerosense-Dry is a two-way stretchable fabric that, thanks to its ultrathin non-porous membrane offers superb waterproofness and tough performance that can withstand any outdoor condition.

REPREVE® INSULATION

Repreve® is an innovative, eco-friendly thermal insulation technology produced by transforming post-consumer plastic into comfortable, environmentally friendly padding. The process involves the reduction into fragments, and subsequent melting, of the re-formed plastic to granules, which are converted into a lightweight, soft, and durable padding material. This sustainable method not only reduces plastic waste, but also minimizes the need for new raw materials making it environmentally friendly. Repreve® recycled padding provides excellent thermal insulation for maximum protection in variable weather conditions, ensuring comfort and freedom of movement in technical garments used for skiing and other winter outdoor activities.

FLEXAGON BACK PROTECTOR

Flexagon redefines the standards of protective comfort with its innovative construction technology. The exceptional flexibility is aided by overlapping layers of Crash Absorb® memory retention foam that move independently of one another, and follow the anatomy of the body. Its ergonomic pattern of hexagon shaped soft pads provide comfort and maximum freedom of movement (6 sides, mobility on the 30° 90° and 150° axes) along with effective protection.

EXOGEN MORE THAN A BACK PROTECTOR

EXOGEN is Dainese's revolutionary Level 1-certified ski back protector. It is designed for maximum freedom of movement and effective back protection. Its exceptional stability results from biomechanical studies of lines of non-extension, inspired by aerospace suit design, to ensure a stable, snug fit. Ergonomics, lightweight, and superior ventilation are ensured by Dainese's advanced PRO-SHAPE 2.0 technology, developed for motorcycling. The auxetic structure of the protector adapts to the movements of the back, expanding to protect even the most exposed areas. EXOGEN combines a flexible, extendable protector with a lycra lining and an adjustable band system to ensure a snug fit.

AUXAGON BACK PROTECTOR

Inspired by the geometry of auxetic structures, which expand in all directions when placed under tension, Auxagon protective technology ensures extreme flexibility and adaptability, following the movements of the human body with extreme precision. Ultimate ergonomics for a superior fit on the back. Auxagon protectors are composed of three independent layers, which glide over each other, offering exceptional mobility for maximum freedom of movement during physical activity. Lightweight and comfortable with maximum protection in all conditions.

ERGOTEK KNUCKLE INSERTS

Dainese Ergotek technology is the ultimate expression of ergonomics and protection. Developed by combining polyurethane and carbon fiber inserts, it allows the fingers to be moved separately, guaranteeing a superior safety of the knuckles. This innovative technology applied to gloves is the result of studies carried out in World Cup Alpine Ski races. Thanks to their unique design, the hand stays light and has a total freedom of movement. It is the new benchmark in terms of protection and comfort.

CASUAL SPORTSWEAR

SPORT CASUAL JACKET

2077400001

Classic casual-style down jacket lined with fine duck down. Maximum comfort and warmth for daily wear, ideal on any informal occasion.
